Syspro can work with any Windows operating system from XP to Windows 8. Syspro Description: • Get information about your system • Optimize performance • Repaint system tray icons • View information about a file • Clean temporary files • View system properties • Logoff/Logon display • Change window title • Change transparency • Set up alarms • Calculate energy consumption • Print services • Control printing • Adjust clock • Print current time • Adjust PC settings • Update service packs • View hard disk drives • Setup hardware • Perform backup • View and clean up information about running programs • Print computer name • Control printers If you are running any Windows application that is installed on the system, it is highly likely that you have a few icons on your desktop that get in the way of your workflow. This is why it is important that you refresh them in order to make the system cleaner and less cluttered. In order to refresh all of the desktop icons, you need to open the taskbar and select "Refresh desktop icon menu". However, this approach requires a lot of mouse clicks and takes time. Fortunately, you don't need to do all that as Syspro includes a utility that is designed to help you refresh all icons on the desktop. Just select "Refresh all desktop icons" from the "Refresh" menu in Syspro and all the icons on the desktop will be updated. You can also specify the program that you want to be refreshed, so you can decide if you need to refresh just the system tray icons or all the icons on the desktop. In order to perform the system maintenance and tasks, Syspro allows you to open notepad and browse

Shareware Task bar dashboard System information System optimization System repair Data backup and restore Print and scan Make yourself more productive Syspro is a Windows software package that comes bundled with a collection of applications that you can deploy on your system in order to improve its overall performance. You can find out details about the energy consumption of your PC, refresh the system tray, get extra information about your computer, as well as perform some system tweaks. System tools The utilities embedded in Syspro are not gathered in a single working environment from where you can activate them using simple clicks, a thing which may prove to be a bit inconvenient for some users. You need to manually open the target application. Syspro integrates several system tools that are designed to help you calculate the energy consumption of your computer for a certain time interval and refresh the system tray icon in order to make unused program icons disappear. You can also get information about your system, such as computer name, current username, service pack, volume label, serial number, total and free space, IP address, startup directory, and desktop directory. Data can be opened in Notepad from where you can save it to plain text file format or print it. Furthermore, you are allowed to print the drives that are present on your system, view data about a custom file (attributes, long and short names, size, date, version), clean temporary files, close all running programs, list all running processes, download data, as well as work with an analog clock and set up alarms. Other utilities included in the package enable you to change the title of a window and adjust the transparency of panels. Bottom line All in all, Syspro accommodates a bunch of handy system tools for getting details about your system and improving its productivity. However, you need to manually trace and open each utility. Each tool is quite simplistic and provides support only for basic features. The program hasn't been updated for a while so it may cause compatibility issues on newer operating systems.
