## Adobe Photoshop EXpress

Adobe Photoshop has been the popular professional photo editing software for many years now. The initial release in 1992 was a major milestone in technology and it is still the global standard for professional photo editing. When it was first released, Photoshop was specialised in retouching and overall photo enhancement. The base business model of Photoshop since the initial release as a “pro” product is to resell upgrades, additional functionality and support to the cost of the software. The software was initially costly, costing in the hundreds of dollars, which naturally led to the question of who would buy it. Most businesses and companies did not have that much money to spare, so no one bought it, and thus, Adobe killed the pro version of Photoshop. Since then, Photoshop has evolved into a multidimensional software, and Photoshop Elements was developed to give users access to the power and functionality of Photoshop, but at a much lower cost. Some people confuse the brand names “Photoshop” and “Adobe Photoshop” to refer to one and the same software. While this may be the case with the latest updates and the “newest” product, Photoshop Elements was developed by Adobe as an alternative to Photoshop.
