A: These are two re-created rars that have been hacked to contain the cracks for the given applications (nothing special). The actual cracks are not stored in these two rars, but instead they are located inside the original installation pack for the given application. The 'original' installation pack might be in different formats, e.g. you would find the 'original' installers for Symantec's PC ANYWHERE (Windows) suite in .dmg format. A .dmg installer contains the main application and a set of additional applications, including a crack (if one is included). If you look carefully at the original installation pack you can easily locate the paths to the correct cracks to crack these two rars: Example of the original Symantec's PC ANYWHERE installation pack: Example of the original installation pack for Grocery Companion (the maker of the 'official' installation.rar included with the app): Example of the original installation pack for Wondershare Video Editor (the maker of the 'official' installation.rar included with the app): Example of a 'hack' that has been done to these two rars: PS: This would explain why no cracks are available for Wondershare Video Editor and you can find cracks for Wondershare Video Editor 3.0.2.16 in the downloaded.rar versions, but no cracks in the 'original' installation pack for Wondershare Video Editor that you can download from other websites (e.g. from Symantec's PC ANYWHERE install page). Further, there has been a problem with automatic control of the remote signaling elements. Specifically, because of their remote location, the valves normally connected to them are unable to read the remote signaling elements to know the position of the valves. However, as a result of this inability to read the valves, the valves have no control over the remote signaling elements and cannot open or close them. Further, remote signaling elements have created a particular problem with automatic control of the valves which is known in the industry as "conditioning" of the automatic control system. To report and characterize ocular involvement in paramyosin-deficient alpacas. Prospective case series. The medical records of all alpacas in which a diagnosis of paramyosin-deficient muscle disease was made over a 3-year period were reviewed. Data were analyzed with Fisher's exact test and logistic regression analysis. Thirteen alpacas were diagnosed with paramyosin-deficient muscle disease, of which 11 were examined with ophthalmic evaluation and ultrasonography. Causes for ophthalmic examination included ocular signs (4 cases), fundus examination (1 case), and ocular imaging (6 cases). Ocular signs included: corneal clouding and iris coloboma in 1 case, nonregenerative hyperaemia and iridocorneal adhesions in 1 case, vitritis in 1 case, and intracranial extension of ocular inflammation in 1 case. Ocular ultrasound revealed a hyperechoic (n = 7) or hypoechoic (n = 4) mass, believed to be associated with the iris, in 1 case.
